

BUY LIGHT,  
GIVE LIGHT!

GOOD &  
MOJO  
BACK TO SUSTAINABILITY

FOR EVERY LAMP YOU BUY, WE DONATE TO THE WAKAWAKA FOUNDATION!

# GOOD& MOJO

BACK TO SUSTAINABILITY

We, the Mojos,  
want to do good by creating  
sustainable lights & helping people  
at the same time!

We only use sustainable materials such as cork,  
recycled paper, woodchips and bamboo in all its varieties.  
As you can imagine, it is a great challenge to find the right  
materials which are also stunning and edgy.

And for every lamp you buy,  
we donate 5% to the WakaWaka Foundation.  
They fight against energy poverty and provide WakaWaka  
solar lights to people in humanitarian aid situations  
in off-grid area's throughout the world.  
So in a nutshell; when you buy light,  
you give light!

Good&Mojo is empowered  
by it's about RoMi  
with love for planet  
& people.

## SUSTAINABLE & BIODEGRADABLE MATERIALS

Sustainability is the ability to maintain the amount of natural resources without exhausting them or causing severe ecological changes. Biodegradability is the capacity of a material to decompose by micro organisms over time.

Below we explain some of the selected materials.

**Abaca** comes from the plant *Musa textilis* also known as Manila hemp. It is a relative of the banana plant. Abaca is native to the Philippines and has been cultivated since the 16th century. Each plant produces 12 to 25 leaf stems. About 2-4 times a year the stems are cut above the roots to harvest the abaca fibres. The plant grows back from the roots.

**Bamboo** is a strong, flexible and fast-growing plant. The fastest growing type can reach 1 meter in a day! Bamboo can be harvested in 3-5 years. Once cut new shoots grow back from the roots. The plant produces 35% more oxygen than a tree. The cultivation is without pesticides/chemical fertilizers. Bamboo is used in construction, food, fuel and the clothing industry. It is a versatile core material in our collection.

Waste **car tires** are no longer suitable for the use on vehicles. They are made of natural and synthetic rubber and not biodegradable. We have to be creative in ways to recycle and re-use these waste tires, so we turned them into cool pendants!

**Cork** is harvested from the trunk of the cork oak (*Quercus suber*). The harvesting process does not damage the tree. It is similar to shearing wool off a sheep. Cork oaks are productive for 150 years. Portugal produces 55% of the world production.

**Eco linen** is a textile made from the fibers of the flax plant and has been around for more than 2000 years. Linen is compared to cotton 30% stronger and less water/chemicals are needed for cultivation. A non-toxic dye is used to colour the linen. Our eco linen shades, handmade in the Netherlands, are available in two natural and six dyed colours.

**Naturescast®** is a promising, patented material developed by one of our passionate, sustainable suppliers. It is a combination of agri-forest waste: fallen twigs, dead barks and shrubs. With a water-based odorless binder the mixture of all these waste timber can be shaped in many ways.

**Recycled paper** like old newspapers, carton and other printed matter are made into **paper pulp**. The advantage of paper is that it can re-used many times. Paper was the first material in the world that is being recycled on a large scale.

**Volcanic rock**. This natural stone comes from magma erupted from volcanoes. Lava explodes out of the volcano and quickly cools at the surface of the earth becoming volcanic rock. Each piece of rock is unique in colour, size and pattern of holes.

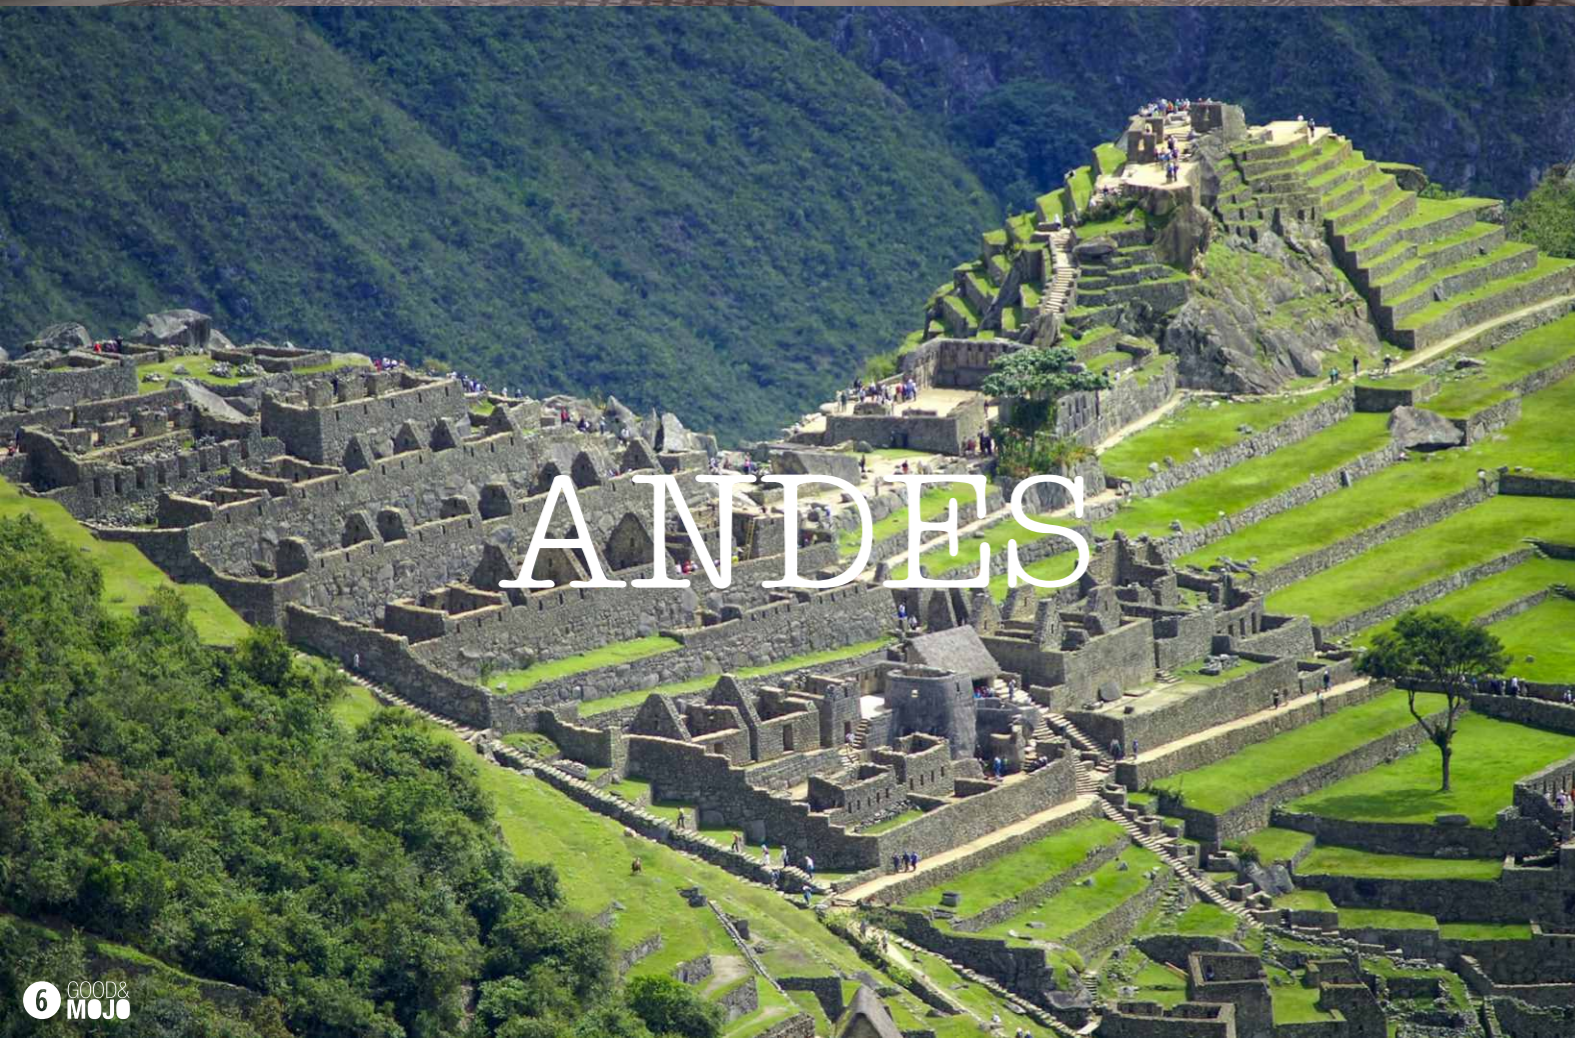

**Woodchips** are made of the leftover pieces of wood processing. The pieces are cut into small chips by a woodchipping machine. This material is being used as biomass fuel, organic mulch for gardening and landscaping.

## Explanation Lumen and Kelvin

Lumen = brightness. Brightness is measured in lumen (lm). In the graphic above, you can compare lumen to wattage of a conventional light bulb. The higher the lumen = the brighter the light.

Kelvin = the light colour of a bulb. A light's colour is measured in Kelvin (K). The higher the Kelvin = the colder the light. Low Kelvin means warm light for a cosy atmosphere. Candle light is 1500K, a conventional light bulb is 2700K and office light is between 3300-5500K.

FOR EVERY LAMP YOU BUY, WE DONATE TO THE WAKAWAKA FOUNDATION!

The Wakawaka  
is the most efficient  
solar light in the world.  
5-10 hrs. charging provides  
at least 34hrs. of safe,  
sustainable light!

BUY LIGHT,  
GIVE LIGHT!

SUSTAINABLE LIGHTING  
WITH A GOOD CAUSE
